CS541A 2026 Fall Course Project

This project aims at providing hands-on experience for developing artificial intelligence technologies. The course project has two avenues: research, and application. Either avenue has the same score breakdown.

Project team formation
Deliverable: fill in the team information on Canvas
Due: October 22, 3pm
Only one member of each team needs to fill in this information.

Proposal presentation
November 12 in lecture
Format specification: No longer than 5 minutes per team. Briefly describe the problem, a review of existing solutions, and your proposed solution.
By November 12 at 3pm, upload your presentation.

Proposal writeup: 10 points
Due: November 12, 3pm
Format specification: A pdf, no more than 2 pages
The proposal contains essentially the same information as the presentation.

Final project presentation: 10 points
December 3 in lecture
Format specification: No longer than 5 minutes per team. Briefly summarize the problem, your solution and how well it addresses the problem.
By December 3 at 3pm, upload your presentation.

Project report: 20 points
Format specification: A pdf, no more than 4 pages (plus unlimited pages for references and appendix), using the official ACL format. The project report contains essentially the same information as the final project presentation, but elaborates.
Remember to include the link to your project's github repository that is open-access.
Due: December 17 at 23:59.
